Introducing to **C&C CONSULTING**

C&C Consulting is the result of decades of experience in the glass field industry, gained from a long and distinguished career in the sector.

Particularly important is the technical expertise acquired in the yachting field, which over the years has experienced a major technological progress that still constitutes its main axis.

The fact that **C&C Consulting** is in an unbiased position guarantees an efficient service free from prejudices and external conditioning.

Our Mission

C&C Consulting intends to usher in a new season of collaboration between shipyards and designers, continuing a long-lasting professional partnership with all the technical entities of the main shipyards in the international yachting scenario.

Through the years, they have been able to appreciate the professionalism and the usefulness of a highly experienced technical support to face the challenges that the market issues.

OUR SERVICES

PRE - DESIGN

C&C Consulting's purpose is to assist the shipyard and the designer during the preliminary design analysis. This is particularly important in order to indicate all possible technical and technological solutions available, as well as to avoid impractical projects.

DESIGN: STATIC, DYNAMIC AND FINISHED ELEMENTS CALCULATIONS

During the design process, C&C Consulting offers support both in static and dynamic calculations, considering not only the glass panels, but also structures and fixings. We use the most modern simulation systems in order to verify the validity of the project to be submitted to the approval bodies (e.g. Lloyds Register, DNV-GL, RINA, BV, ABS, etc.)

DEVELOPMENT OF NEW PROJECTS AND TECHNOLOGIES

In a constantly evolving technological market, C&C Consulting aims to support designers and construction sites with its experience in identifying, studying and fine - tuning the new materials that appear on the market.

FACTORY ACCEPTANCE TEST (FAT)

C&C Consulting offers a careful inspection of the manufactured products at the production site (both in Italy and abroad) in order to guarantee full compliance of all specifications, techniques and aesthetics agreed in the contract. As far as large projects are concerned, for each inspection we commit to issue a report with technical and photographic details.

ON-SITE ASSEMBLY ASSISTANCE

C&C Consulting offers its support in assembly services directly on the construction site in order to streamline the installation activities and to ensure the full compliance with the technical specifications. Our mission is to guarantee the reliability, efficiency and durability of the materials.

PERIODIC CHECKS AND AFTER SALES ASSISTANCE

C&C Consulting aims to perform periodic inspections of the glass panels with a particular attention towards their fixing systems, namely sealants and glues. Our purpose is to avoid their premature deterioration, which would lead to their replacement for both aesthetic and functional reasons. These after-sales services are crucial in order to ensure the longevity of the systems and to relieve the shipyard and the ship-owner of responsibility that may lead to legal lawsuits.

TECHNICAL AND INSPECTIVE VISITS ON BOARD

C&C Consulting offers an on-board technical inspection service in order to identify technical problems that could arise in the after-sales, especially those concerning the responsibilities which may not have been defined previously.

SUPPORT FOR THE REFIT MARKET

The refit market is thriving, and it plays a strategic role for any shipyard. C&C Consulting aims to help shipowners and shipyards find spare parts and organises all the related activities considering customer needs and maintenance timings.
